

Greetings to all visitors!

These pages offer lots of interesting information on the contemporary systems of personal and spiritual development. The models of theoretical and practical knowledge that are presented here make an integral whole that covers most of important aspects of psycho-spiritual territory. The existence of an accurate map, together with high quality technologies, enables all potential aspirants to immediately start with practical work and achieve significant results. The benefits from the systems described here are reserved for all persons actively interested in solving their personal problems and achieving their goals, whether mundane or spiritual.

The final goal of personal development is the discovery and realization of our life's purpose. And the universal purpose of human life is creative self-realization. There are two basic means leading towards creative realization - mental and spiritual health, or the karmic purification process and spiritual enlightenment. Mental health or the purification of the Soul can be achieved by dissolving traumatic experiences and their psychological consequences - disharmonious family relationships, partnership problems, creative blockages or identifications with the outer sources of fulfillment. Spiritual health can be achieved with genuine spiritual experience or direct experience of Truth, as well as with energy work which enables us connection with the most subtle aspect of our being, usually called God.

I invite you to read the articles and texts about the courses and treatments that were created in order to enable high quality purification of your Soul and true spiritual enlightenment, leading gradually towards creative self-realization. Namely, personal development today is not a privilege of small number of the "chosen ones" - it has become a part of everyday life for everybody. We are witnessing the birth of a new civilization who's main characteristic will be the consciousness of the necessity to take responsibility for our lives and readiness for the continuous development of personal potentials. By leaving the rigidity of the academic approach towards human Soul and overcoming the limits imposed on the spiritual experience by the most of religions, contemporary psycho-spiritual science slowly builds the basis for the global renaissance that is going to enable people to reconnect with nature rediscover themselves - their true feelings and deep personal longings.
